II. FISCAL YEAR AND ACCOUNTING CURRENCY**Accounting period, accounting currency**

The Corporation's fiscal year begins on 1st January and ends on 31st December each year.

The currency unit used for accounting entries is the Vietnamese Dong (VND).

III. ACCOUNTING STANDARDS AND SYSTEM**1. Accounting System**

The Corporation applies the Vietnamese accounting system issued under Circular No. 200/2014/TT-BTC dated 22nd December, 2014, by the Ministry of Finance, which provides guidelines on the corporate accounting system; Circular No. 202/2014/TT-BTC dated 22nd December, 2014, by the Ministry of Finance, which provides guidelines on the preparation and presentation of consolidated financial statements; and other legal documents as prescribed by the government.

2. Statements for the compliance with Accounting Standards and System

The Corporation has applied the Vietnamese Accounting Standards and the guidelines issued by the government. The financial statements are prepared and presented in full compliance with the provisions of each applicable standard, the guiding circulars for implementation, and the current accounting regulations in force.

IV. SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES**1. Basis of Preparation of Consolidated Financial Statements**

The consolidated financial statements of the Corporation are prepared on the basis of consolidating the financial statements of the Corporation and the financial statements of its subsidiaries under the control of the Corporation (subsidiaries) as of 31st March, 2025. Control is achieved when the Corporation has the ability to govern the financial and operating policies of the investee companies to obtain benefits from their activities.

The financial statements of the subsidiaries are prepared for the same fiscal year as the Corporation's financial statements, applying consistent accounting policies with those of the Corporation. Where necessary, the financial statements of the subsidiaries are adjusted to ensure consistency with the accounting policies applied by the Corporation and its subsidiaries.

The results of operations of subsidiaries acquired or disposed of during the period are presented in the consolidated financial statements from the acquisition date or up to the date of sale of the investment in those subsidiaries.

Non-controlling interests represent the share of profit or loss and net assets not held by the Corporation's shareholders and are presented separately in the consolidated balance sheet and consolidated income statement.

Equitization Finalization

The Corporation officially transitioned to a joint-stock Corporation model on 8th November, 2016. The consolidated financial statements for the fiscal year ending on 31st March, 2025, do not include adjustments related to the equitization finalization, as the Corporation has not yet received approval for the equitization finalization from the relevant authorities at the time of officially transitioning to a joint-stock Corporation.

2. Cash and cash equivalents

Transactions in foreign currencies are converted into Vietnamese Dong based on the actual exchange rate at the time the transaction occurs. At the time of preparing the financial statements, monetary items denominated in foreign currencies are converted at the buying exchange rate of the commercial bank where the Corporation holds its accounts, as published at the time of preparing the financial statements.

Cash equivalents are short-term investments with a maturity of no more than 3 months, easily convertible into cash, and with minimal risk of changes in value since the investment was made, at the time of the reporting.

3. Receivables

The receivables comprise the customer receivables and other receivables. Receivables are recognized at the carrying amounts less allowances for doubtful debts.

Allowance for doubtful debts is assessed and made for overdue receivables that are difficult to be collected, or the debtor is unable to pay due to dissolution, bankruptcy or similar difficulties.

4. Financial Investments

Investment in Joint Ventures

A joint venture is an entity established based on an agreement, where the Corporation and other participants engage in economic activities under joint control. Joint control is defined as the ability to make strategic decisions related to the operational and financial policies of the joint venture with the consent of all participating parties.

Investment in Associates

An associate is a Corporation in which the Corporation has significant influence but does not control or jointly control the Corporation. Significant influence is indicated by the Corporation's ability to participate in decisions regarding the financial and operational policies of the investee, without having control or joint control over these policies.

The Corporation initially recognizes investments in joint ventures and associates at cost. The Corporation records its share of the investee's accumulated net profit in the income statement after the investment date. Other amounts received by the Corporation, beyond its share of profits, are considered as recoveries of the investment and are recognized as reductions in the investment's book value.

Investments in joint ventures and associates are presented in the balance sheet at cost, less any provision for impairment (if applicable). Provisions for impairment of investments in joint ventures and associates are made in accordance with current accounting regulations.

Investment in Equity Instruments of Other Entities

Investment in equity instruments of other entities reflects investments in equity securities where the Corporation does not have control, joint control, or significant influence over the investee.

Investments in equity instruments of other entities are recorded at cost, less any provision for impairment.

5. Inventories

Inventory is valued at cost; however, if the net realizable value is lower than the cost, it is valued at the net realizable value. The cost of inventory includes purchase costs, processing costs, and other directly related costs incurred to bring the inventory to its current location and condition;

The cost of sales is determined using the weighted average method;

Inventory is accounted for using the perpetual inventory method;

The provision for inventory devaluation is made in accordance with current accounting regulations. Accordingly, the Corporation is allowed to make provisions for inventory that is obsolete, damaged, or of inferior quality, and in cases where the cost of inventory exceeds its net realizable value at the end of the fiscal year.

6. Fixed Assets and Depreciation

Tangible and Intangible Fixed Assets

Tangible and intangible fixed assets are recognized at cost. During their usage, fixed assets are recorded at their original cost, accumulated depreciation, and their remaining value.

Fixed assets acquired before 30th June, 2014, are revalued during the equitization process of state-owned enterprises. The original cost and accumulated depreciation are adjusted based on the revaluation results, which must be approved by the competent authorities according to regulations. The remaining value of these assets is depreciated based on the remaining useful life of the assets.

Depreciation is calculated using the straight-line method. The depreciation period is determined according to the depreciation schedule specified in Circular No. 45/2013/TT-BTC dated 25th April, 2013, by the Ministry of Finance and other amendments or supplementary legal documents as per state regulations.

7. Prepaid Expenses

Prepaid expenses that only relate to the current financial year's production and business activities are recognized as short-term prepaid expenses and recorded as production and business costs within the financial year.

Expenses incurred during the financial year but allocated to long-term prepaid expenses are gradually amortized into the operating results over multiple years.

The calculation and allocation of long-term prepaid expenses to production and business costs in each accounting period are based on the nature and extent of each type of expense to select a reasonable allocation method and criteria. Prepaid expenses are gradually allocated to production and business costs using the straight-line method.

8. Payables

Criteria for Classifying Payables

- Trade Creditors: These include amounts owed arising from transactions related to the purchase of goods, services, or assets. Payables also include amounts due when importing through an agent.
- IntraCorporation Payables: These refer to amounts owed between the parent Corporation and its subsidiaries or branches that do not have legal status and are dependent entities for accounting purposes.
- Other Payables: These include any payables not classified as trade payables or interCorporation payables.

Each payable is recorded in detail for each payee and type of payable, with tracking of the repayment terms and the corresponding currency.

Payables with remaining maturities of less than 12 months (within one business cycle) at the reporting date are classified as short-term liabilities. All other payables not classified as short-term are classified as long-term liabilities. At the reporting date, payables are reclassified according to this principle.

The Corporation revalues payables in foreign currencies at each financial statement date. The exchange rate used to revalue foreign currency payables is the selling exchange rate of the commercial bank designated by the Corporation for customer payments at the reporting date, or the bank with which the Corporation frequently transacts.

The Corporation will immediately recognize a payable when there is evidence indicating a probable loss, in accordance with the prudence principle.

Liabilities must not be recognized below their settlement value.

Provisions for payables are recognized at the reporting date in accordance with applicable regulations.

9. Loans and finance lease liabilities

The value of loans is recorded based on each disbursement and repayment. The value of finance lease liabilities is the total amount payable, calculated as the present value of minimum lease payments or the fair value of the leased asset remaining at the financial statement date.

Loans and finance lease liabilities are accounted for in detail and tracked by each lender, borrower, loan agreement, type of borrowed asset, loan term, and currency of the loan.

When preparing financial statements, the balances of loans and finance lease liabilities denominated in foreign currencies are revalued at the selling exchange rate of the bank with which the Corporation conducts its loan or finance lease transactions.

10. Recognition and and capitalization of Borrowing costs

Borrowing costs are recognized as an expense in the production and business costs of the period in which they are incurred, unless capitalized in accordance with the Accounting Standard on "Borrowing Costs." Accordingly, borrowing costs directly related to the purchase, construction, or production of assets that require a relatively long time to complete and ready for use or operation are capitalized into the asset's cost until the asset is ready for use or operation. Any income generated from the temporary investment of borrowed funds is deducted from the asset's cost.

For borrowings specifically related to the construction of fixed assets or investment properties, interest is capitalized even if the construction period is less than 12 months.

The capitalization rate for borrowing costs during the period is 0%.

11. Accrued Expenses

Accrued expenses reflect amounts owed for goods and services received from suppliers or provided to customers but not yet paid due to the absence of invoices or insufficient accounting documents. These expenses are recognized as production and business costs based on the matching principle between revenue and expenses. When the necessary accounting documents are obtained, any discrepancies between the

estimated amounts and the actual expenses are adjusted by either adding or reducing the corresponding costs based on the difference.

12. Owners' equity

Owner's Contributed Capital, Share Premium, and Other Owner's Capital

The owner's investment is recognized based on the actual capital contributed by the owner.

Share premium is recognized as the difference between the actual issue price and the par value of the shares at the time of the initial share issuance, additional issuances, or the reissuance of treasury shares.

Other owner's equity is recognized as the remaining value after deducting (-) any taxes payable (if applicable) related to donated assets from the fair value of assets received by the business from other organizations or individuals, as well as any additions from the business's operating results.

Undistributed Profits

Retained earnings represent the profits from the Corporation's activities after tax, less any adjustments for retroactive application of changes in accounting policies and adjustments for material errors from previous years.

Profits are distributed to shareholders according to the annual resolutions passed by the general shareholders' meeting.

13. Revenue

Revenue from Sale of Goods

Revenue from the sale of goods is recognized when the following conditions are met simultaneously:

- The majority of the risks and benefits associated with the ownership of the product or goods have been transferred to the buyer;
- The Corporation no longer retains control over the goods as the owner or has control over the goods;
- The revenue is reasonably certain;
- The Corporation has received or will receive economic benefits from the sale transaction;
- The costs associated with the sale transaction can be determined.

Revenue from Provision of Services

Revenue from the provision of services is recognized when the outcome of the transaction can be reliably determined. If the service provision spans multiple periods, revenue is recognized in the period corresponding to the completed work as of the balance sheet date for that period. The outcome of the service provision transaction is determined when the following conditions are met:

- The revenue is reasonably certain;
- There is a likelihood of receiving economic benefits from the service transaction;
- The portion of the work completed as of the balance sheet date can be determined;
- The costs incurred for the transaction and the costs to complete the service provision can be determined.

The portion of the work completed for the provision of services is determined using the method of assessing the work completed.

Revenue from Financial Activities

Revenue from interest, royalties, dividends, profits, and other financial revenues is recognized when the following two conditions are met simultaneously:

- There is a likelihood of receiving economic benefits from the transaction;
- The revenue is reasonably certain.

Dividends and profit distributions are recognized when the Corporation has the right to receive the dividend or profit from its investment.

Revenue from Construction Contracts

Revenue from construction contracts is recognized when the outcome of the construction contract can be reliably determined and is confirmed by the customer. The revenue and costs related to the contract are recognized in proportion to the work completed during the period, reflected on the issued invoice.

14. Cost of Goods Sold

When recognizing revenue, a corresponding expense (cost of goods sold) is also recognized, which is related to generating that revenue. This expense includes the costs incurred in the period that generated the revenue, as well as costs from previous periods or accrued expenses that are related to the revenue of that period.

15. Financial expenses

The financial costs recognized include:

- Borrowing costs and interest expenses on loans;
- Losses arising from exchange rate fluctuations related to transactions involving foreign currencies.

These costs are recognized in full for the period and are not offset against financial income.

16. Administrative Expenses

Administrative expenses reflect the total general expenses of the Corporation, such as: salaries and related insurance for management personnel, depreciation of fixed assets used for corporate management, land lease, business license tax, provision for doubtful debts, and outsourced services for the management function of the Corporation.

17. Current corporate income tax expense and deferred corporate income tax expense

Current income tax expense is determined based on taxable income and the applicable corporate income tax rate for the current year.

Deferred income tax expense is determined based on the temporary differences that are deductible, taxable temporary differences, and the corporate income tax rate.

18. Related Parties

Parties are considered related to another party if they have direct or indirect relationships that allow them to control or have significant influence over the other parties, either through regular control or the ability to significantly influence. Transactions with related parties are disclosed by the Corporation in the notes to the consolidated financial statements.
